

Menasha Utilities – Metering/Substation Technician

This position incorporates responsibilities of two areas in the Utilities. The Metering/Substation Technician will have the responsibility for electric metering functions and as a Journeyman Substation Technician.

Most of the time the Metering/Substation Technician will be working as a Meter Technician where the position is responsible for the installation, testing, and repair of all residential, commercial and industrial electric meters and related metering equipment. This position also is responsible for meter reading and the implementation of AMI meter conversion.

In addition to the Metering Technician function this position is responsible for working as a Substation Technician as needed and work a scheduled rotation providing 24/7 monitoring and control coverage for the Electrical Distribution System.
